

Color & Typography Guide

Generated from the current Bondtite website CSS on 13 May 2026. Includes exact HEX values, visible swatches, usage attributes, derived tints and typography details.

Core system: warm neutrals + navy type + Bondtite blue

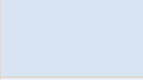

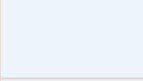

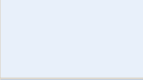

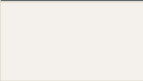

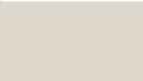

1. Core Color Palette

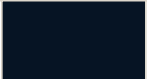

Token	Color	HEX	Role	Where it is used	Uses
--paper		#FBFAF7	Main warm page background	Body background, header surfaces, light sections, button text on blue	29
--bone		#F4F1EC	Secondary warm surface	Section bands, card media backgrounds, pale product panels, footer contrast blocks	35
--line		#DDD7CC	Divider and border	Card borders, table lines, spec rows, form controls, section separators	45
--ink		#0A1628	Primary navy ink	Main text, dark sections, footer, spec panels, high-contrast UI blocks	23
--ink-soft		#2C3A4F	Body copy navy	Paragraphs, descriptions, long-form readable copy, secondary content	30
--ink-quiet		#5A6878	Muted utility text	Metadata, captions, breadcrumbs separators, labels and quiet helper text	16

Token	Color	HEX	Role	Where it is used	Uses
--blue		#0E4FA8	Brand and action blue	CTA buttons, links, active tabs, accent words, focus outline, mono labels	33
--blue-deep		#082E63	Deep blue interaction	Primary button hover state	1
--amber		#C8852B	Warm technical accent	Small badges, product dots, subtle highlights and technical markers	3

2. Derived Tints, Overlays and One-Off Colors

These values are not separate brand colors. They are transparency states, shadows, gradients or warm-white refinements derived from the core palette.

Value	Color	Attribute	Where it appears
<code>rgba(14, 79, 168, 0.18)</code>		Selection highlight	Text selection background
<code>rgba(14, 79, 168, 0.08)</code>		Soft blue tint	Resource icons, badges and light emphasis blocks
<code>rgba(14, 79, 168, 0.12)</code>		Product media glow	Application listing product-media radial background
<code>rgba(14, 79, 168, 0.34)</code>		Application card glow	Dark application cards behind product pack imagery
<code>rgba(10, 22, 40, 0.04-0.92)</code>		Dark overlays	Video overlays, application card gradients and photo readability layers
<code>rgba(244, 241, 236, 0.03-0.78)</code>		Light-on-dark text/borders	Footer, dark panels, application card text and dividers
<code>rgba(251, 250, 247, 0.68-0.90)</code>		Translucent paper	Sticky header blur and soft panels
<code>rgba(221, 215, 204, 0.68-0.86)</code>		Soft border variants	Cards and sticky header border states
<code>#FFFD9 / #FFFD8</code>		Warm white one-offs	Selected card state and product surface refinements

Value	Color	Attribute	Where it appears
#061424 / #0B1D32 / #07101D		Application dark gradient	Application cards with real Bondtite product pack imagery

3. Color Usage Schema

UI area	Color rule	Purpose
Page background	--paper #FBFAF7	Warm, almost-white base for the full website
Section contrast	--bone #F4F1EC	Breaks long pages into calm product bands
Primary text	--ink #0A1628	Strong navy, used instead of black for premium industrial tone
Body descriptions	--ink-soft #2C3A4F	Readable long-form text with less visual weight than headings
Small labels	--blue #0E4FA8 + mono font	Signals navigation, categories, breadcrumbs and technical labels
Primary CTA	--blue #0E4FA8	Find your bond, details buttons, active controls
CTA hover	--blue-deep #082E63	Darker, stable hover state
Borders	--line #DDD7CC	Keeps cards structured without high contrast
Dark panels	--ink #0A1628 + --bone #F4F1EC	Footer, specs, bond finder and application cards
Warm accent	--amber #C8852B	Used only as a precise technical/product accent

4. Typography System

The site imports General Sans from Fontshare, Inter Tight and JetBrains Mono from Google Fonts. Typography is modern, geometric and trade-focused.

Role / selector	Font family	Weight	Attributes / usage
Display font	General Sans	300, 400, 500, 600	Large headings, hero lines, product titles, section display text
Body font	Inter Tight	400, 500, 600	Paragraphs, navigation, buttons, cards, spec text
Mono font	JetBrains Mono	500, 600	Eyebrow labels, metadata, technical tags, table labels
.display	General Sans	300	letter-spacing -0.04em, line-height 0.98
.accent	inherits display/body	600	brand blue #0E4FA8 for key words
.mono	JetBrains Mono	600	11px, uppercase, letter-spacing 0.18em, blue
Body	Inter Tight	400	16px, line-height 1.6, ink #0A1628
Buttons	Inter Tight	600	15px, 44px minimum height, 8px radius
Hero / page H1	General Sans	300	clamp around 48px-104px depending section
Card titles	General Sans	500	typically 25px-26px, tight line-height

5. Key CSS Typography Tokens

Token	Value	Where used
--font-display	"General Sans", "Inter Tight", system-ui, sans-serif	Hero, display headings, product titles
--font-body	"Inter Tight", system-ui, sans-serif	Body copy, navigation, controls
--font-mono	"JetBrains Mono", ui-monospace, monospace	Technical labels, metadata, category markers
--container	1280px	Main content container max width
Body size	16px / line-height 1.6	Global readable base type
.section	96px vertical padding	Major page section rhythm
.section--tight	72px vertical padding	Tighter section rhythm
.button	15px, 600 weight, 44px min-height, 8px radius	Primary and secondary actions

6. Practical Brand Guidance

Use `--paper` as the main website canvas and `--bone` for section contrast. Use `--ink` for strong headings and `--ink-soft` for paragraphs. Reserve `--blue` for action, navigation states and important word accents. Keep `--amber` rare; it works best as a technical marker, not as a main theme color.

Avoid adding unrelated bright colors. The current palette works because it stays controlled: warm neutrals, navy structure, blue action and tiny amber highlights.
